

As the office URL is not accessible, checking with Demo sites.

Scenario1:

Invalid credentials scenario

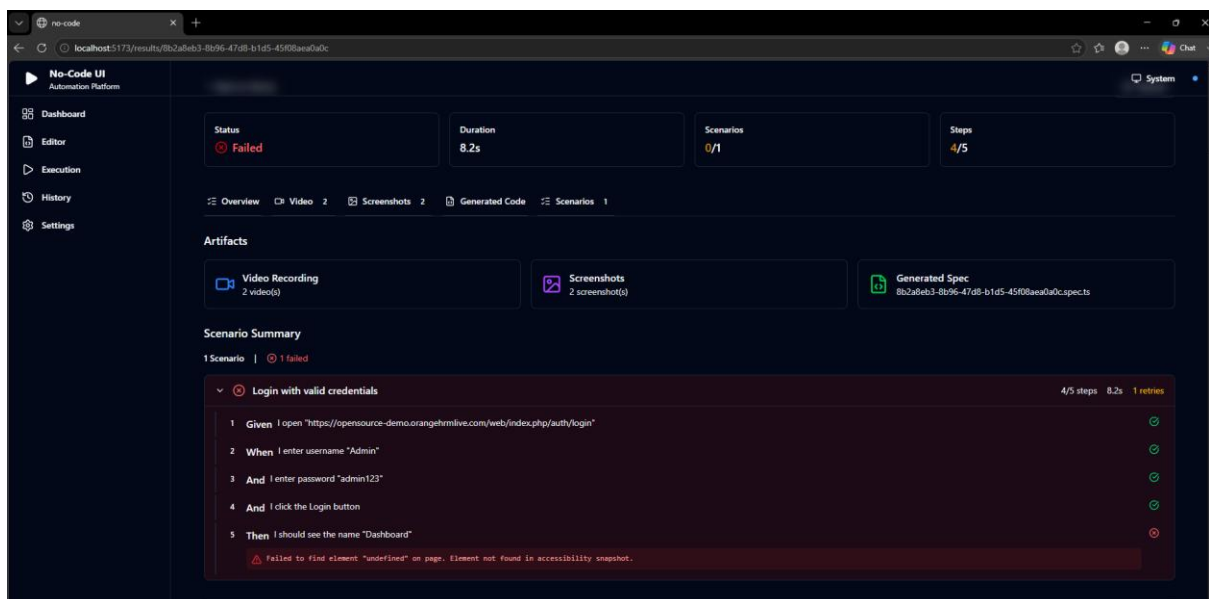

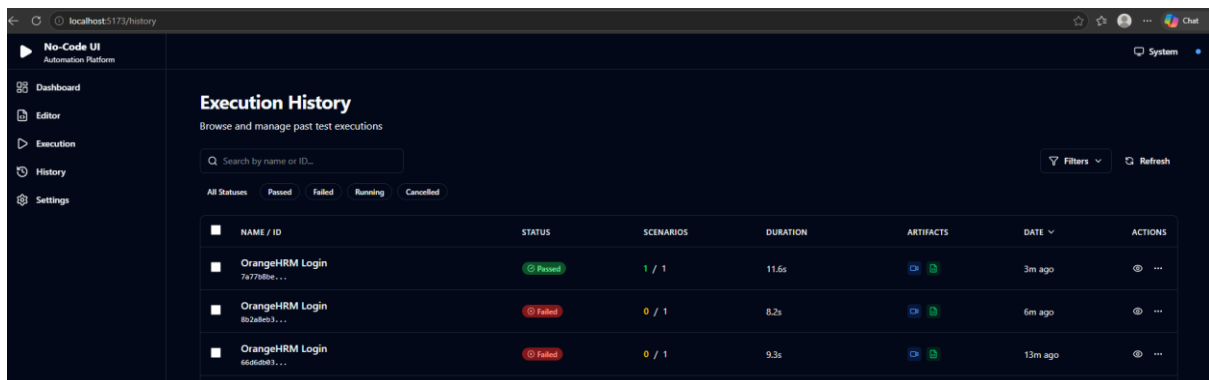

The screenshot displays the No-Code UI Automation Platform interface. The left sidebar contains navigation links: Dashboard, Editor, Execution, History, and Settings. The main area shows the results of a scenario execution. At the top, there's a 'Back to History' link and a 'Refresh' button. Below this, a summary box shows the status as 'Completed', duration as '10.0s', scenarios as '1/1', and steps as '5/5'. A tab bar below the summary shows 'Overview', 'Video 1', 'Screenshots 1', 'Generated Code', and 'Scenarios 1'. The 'Artifacts' section lists 'Video Recording 1 video(s)', 'Screenshots 1 screenshot(s)', and 'Generated Spec f384f5a8-1805-45a3-94ec-efa78c890805.spec.ts'. The 'Scenario Summary' section shows '1 Scenario | 1 passed'. A detailed view of the scenario 'Login with invalid credentials' (5/5 steps, 10.0s) is shown below, listing five steps: 1. Given I open 'https://opensource-demo.orangehrmlive.com/web/index.php/auth/login', 2. When I enter username 'Admin', 3. And I enter password 'wrongpassword', 4. And I click the Login button, and 5. Then I should see an invalid credentials error. All steps are marked with green checkmarks. At the bottom right, there is a 'Download All Artifacts' button.

This screenshot shows the 'Invalid Login' scenario results in the No-Code UI Automation Platform. The interface is similar to the previous one, but the 'Screenshots' tab is selected, showing a single screenshot of the 'Invalid Login' page. The page shows a login form with fields for 'Username' and 'Password', and a 'Login' button. A red error message 'Invalid credentials' is displayed above the form. The status bar at the top indicates 'Completed', '10.0s', '1/1', and '5/5'. The 'Artifacts' section shows '1 screenshot'. The 'Scenario Summary' section shows '1 Scenario | 1 passed'. The detailed view of the scenario 'Invalid Login' (1 screenshot) is shown below, with a green checkmark and 'Passed' status. The screenshot of the login page is displayed. At the bottom right, there is a 'Download All Artifacts' button.

Scenario 2:

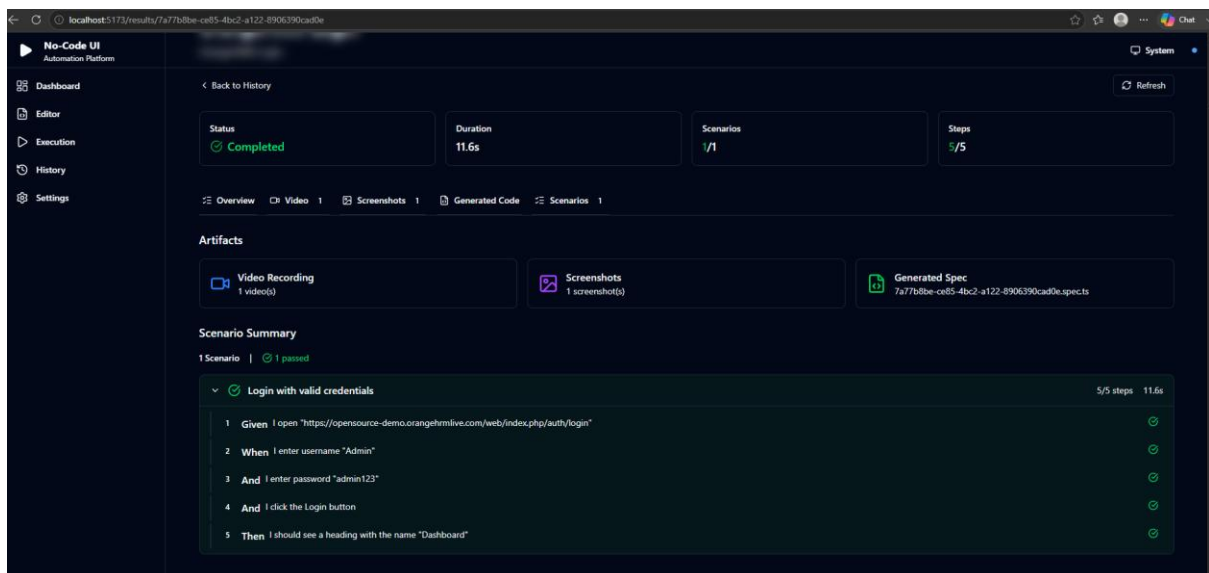

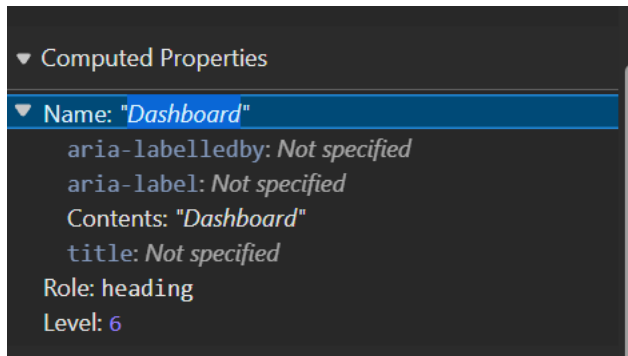

Valid scenario by checking login and dashboard.

It was failing as the tool was unable to identify the header.

Later observed that it was considering only the accessible DOM, so modified the step and then the TC got passed.

Probably, we should consider fixing this, so that it can consider the UI element without even going with the accessibility DOM

With the modified step, TC got passed.
